Product Overview

The Hitachi ID Management Suite is a complete identity and access management solution that enables organizations to more securely and efficiently manage the user lifecycle across enterprise applications and systems.

The Management Suite combines the power of Hitachi ID Systems flagship technologies, Hitachi ID Identity Manager for user provisioning and Hitachi ID Password Manager for password management with more targeted products including Hitachi ID Group Manager to manage user access rights, Hitachi ID Access Certifier to review user rights and clean up stale privileges and Hitachi ID Privileged Access Manager to secure access to privileged accounts.

The Management Suite creates real business value by increasing productivity for users, reducing IT overhead, strengthening network security and providing internal controls to support compliance with privacy protection and corporate governance regulations.

The Management Suite includes several functional identity and access management modules:

- **Identity Manager** – User provisioning, RBAC, SoD and access certification.
Identity Manager includes the following modules, at no extra charge:
 - Access Certifier – Periodic review and cleanup of security entitlements.
 - Group Manager – Self service management of security group membership.
 - Hitachi ID Org Manager – Delegated construction and maintenance of Orgchart data.
- **Password Manager** – Self service management of passwords, PINs and encryption keys.
Password Manager includes the following modules, at no extra charge:
 - Hitachi ID Login Manager – Automated application logins.
 - Hitachi ID Telephone Password Manager – Telephone self service for passwords and tokens.
- **Privileged Access Manager** – Control and audit access to privileged accounts.
